(54) IMAGE PROCESSING SYSTEM

(57) Abstract:

PURPOSE: To attain image processing and other information processing by putting data from a document information processing system on computer bus lines in the intervals of outputting image data from the bus line.

CONSTITUTION: Text image data read by a reader 1 is converted by a RP adapter 3 to the data which can be processed by a computer bus 1, stored in memory 5 temporarily then stored a magnetic disk 7 and a floppy disk 8 through a disk controller 6 as necessity. The data stored is sent to a communication line through a line control circuit 9 and a coupler 10. Text image data sent from the communication line is stored in the memory 5 then stored the magnetic disk 7 and the floppy disk 8 by the disk controller as necessity. The stored data is sent to a printer 2 through the RP adapter 3 to product images.
